PROFESSIONAL SUMMARY

Senior Software Engineer and Chief Technology Officer with 10+ years building high-performance, real-time distributed systems using Python, Django, FastAPI, Node.js, and React Native. Deep expertise architecting scalable microservices for fintech platforms (digital lending, crowdfunding, payments) processing millions of real-time transactions daily with 99.9% uptime and sub-100ms latency. Proven track record delivering end-to-end mobile and web products across fintech, wellness, and EdTech domains. Experienced technical leader mentoring cross-functional engineering teams, driving CI/CD adoption, and integrating complex payment gateways (Paystack, CrayFi, Interswitch, Flutterwave). Passionate about solving challenging problems in real-time data processing, event-driven architecture, and product-led growth.

CORE TECHNICAL EXPERTISE

Languages & Frameworks	Python (Expert, 10+ yrs) • Django • FastAPI • Flask • Node.js • PHP / Laravel • JavaScript / TypeScript
Mobile & Frontend	React Native (iOS & Android) • React.js • Next.js • HTML / CSS • Bootstrap • Redux
Distributed Systems	Microservices Architecture • Real-Time Data Processing • Low-Latency Design • High Concurrency • Fault Tolerance
Event-Driven Architecture	Celery / RabbitMQ • WebSockets • Real-Time Streaming • Async Processing • Webhooks
Cloud & Infrastructure	AWS • GCP • Docker • Kubernetes • CI/CD • Auto-Scaling • Load Balancing • Monitoring & Observability
Databases & Data	PostgreSQL • MySQL • Redis • Data Modelling • Query Optimisation • Caching Strategies • Sharding
APIs & Integration	RESTful APIs • GraphQL • Payment Gateways (Paystack, CrayFi, Interswitch) • Third-Party APIs • Rate Limiting
Security & Compliance	KYC / AML Pipelines • JWT Auth • OAuth2 • 2FA • API Security • Data Encryption

PROFESSIONAL EXPERIENCE

Chief Technology Officer

June 2022 – Present

Silicon Harbour Transprojects Limited, Lagos

Scalable Systems Architecture & Flagship Products:

- Architected and built **Geefime**, a production-grade crowdfunding microservices platform (Django, Celery, PostgreSQL, Redis) processing NGN donations via Paystack and international payments via CrayFi; implemented transaction splits, automated settlement reconciliation, webhook-based payment processing, and fundraiser wallet management at scale.
- Delivered 3 high-performance, fault-tolerant microservices platforms (InstantBillsPay, MoMonie, GeefMe) handling millions of real-time transactions daily with 99.9% uptime and sub-100ms latency.
- Designed scalable backend systems sustaining 10,000+ requests/second using Python, Django, and FastAPI following microservices architecture patterns with Docker containerisation.
- Reduced database query latency by 25% through systematic optimisation, indexing strategies, Redis caching layers, and connection pooling.

Real-Time Processing & Event-Driven Architecture:

- Built real-time transaction processing pipelines with event-driven architecture using Celery message queues, WebSockets, and asynchronous processing for real-time matching and payments.
- Implemented real-time fraud detection and validation pipelines processing transaction data streams with millisecond-level response requirements.
- Integrated Paystack, CrayFi, and KYC/AML APIs with robust error handling, retry mechanisms, and circuit breaker patterns for resilient service communication.
- Designed Celery Beat periodic task scheduler for automated financial operations: pending donation recovery, settlement reconciliation, withdrawal processing, and exchange rate updates.

Cloud Infrastructure & DevOps:

- Built and operated high-throughput systems on AWS and GCP with auto-scaling, load balancing, and observability using CloudWatch and Stackdriver.
- Designed CI/CD pipelines with Docker containerisation reducing deployment time by 94% while maintaining production stability via zero-downtime rolling deployments.
- Implemented comprehensive structured JSON logging, monitoring, and alerting across all microservices for rapid incident diagnosis.

Technical Leadership:

- Led technical direction, driving architectural decisions and engineering excellence through systematic design reviews and documentation.
- Mentored a team of 5 developers through code reviews, design discussions, and pair programming—improved code quality by 50% and reduced post-deployment bugs by 20%.
- Collaborated with cross-functional teams (frontend, backend, QA, product) to deliver integrated solutions aligned with business objectives and regulatory compliance requirements.

Chief Technology Officer – Fitztar Mobile App

Oct 2025 – May 2026

Inpruva Limited, Lagos

- Led end-to-end technical architecture and development of **Fitztar**, a cross-platform fitness and wellness app built with **React Native** (iOS & Android) and a **Node.js** microservices backend, delivered from concept to production in 8 months.
- Designed a cloud-based Node.js backend supporting real-time activity tracking, personalised workout and nutrition planning, and a gamified rewards system with leaderboards, achievement badges, and streak tracking.
- Built a secure in-app wallet system for reward point accumulation and redemption, integrating third-party fitness wearable APIs for real-time biometric data synchronisation.
- Architected a social community engine with progress sharing, community challenges, and a smart notification system for habit reminders—driving user retention and DAU growth.
- Implemented a real-time analytics dashboard tracking user engagement metrics, workout completion rates, and reward redemption patterns for business intelligence.
- Defined technical roadmap, established engineering best practices, conducted code reviews, and led a team of 4 developers in agile 2-week sprint cycles.
- Configured AWS infrastructure (EC2, RDS, S3, SNS/SQS) with auto-scaling and push notification delivery, achieving 99.5% service availability from launch.

Fullstack Python Developer

Nov 2022 – Jun 2023

Lendigo Nigeria

- Contributed to Lendigo's digital SME lending platform serving 2,500+ businesses with over **₦6 billion** in disbursed short-term business loans across Nigeria.
- Built Python/Django backend services for the loan origination and lifecycle management system, implementing automated credit assessment workflows, loan state machines, and repayment scheduling.
- Developed RESTful APIs powering the web and mobile loan application flow, streamlining borrower onboarding and reducing application-to-decision time by 40%.
- Integrated payment gateway services for automated loan disbursement and repayment processing, with robust reconciliation mechanisms and idempotent transaction handling.

- Built a KYC/AML verification pipeline integrating third-party identity services, ensuring regulatory compliance with CBN digital lending guidelines.
- Implemented real-time credit risk scoring algorithms processing applicant financial data, bank statements, and BVN records to produce automated eligibility decisions.
- Developed React.js frontend components for the borrower dashboard—loan status tracking, repayment schedules, account statements, and document upload portal.
- Operated in an Agile environment with 2-week sprints, CI/CD pipelines (GitHub Actions), and a PostgreSQL-backed data warehouse for financial reporting.

Software Engineering Instructor

May 2021 – Jun 2022

New Horizons Computer Learning Centers, Lagos

- Trained 200+ engineers in Python, distributed systems, system design principles, RESTful API development, and scalable architecture patterns; 85% of graduates transitioned to senior roles.
- Designed curriculum covering microservices architecture, Python/Django backend development, React.js frontend, performance optimisation, data structures and algorithms, and cloud-native application development on AWS.
- Delivered hands-on lab sessions and real-world capstone projects—e-commerce platforms and RESTful API services—to bridge theoretical knowledge and production-ready engineering.
- Conducted one-on-one mentorship, portfolio reviews, and mock technical interviews to prepare students for mid-to-senior engineering positions in Nigerian and international tech companies.
- Introduced DevOps fundamentals: Git workflows, Docker containerisation, CI/CD with GitHub Actions, and Linux server management, ensuring graduates were production-environment ready.

Backend Software Developer

Nov 2020 – May 2021

TDI Global Limited, Lagos

- Built scalable backend services for a payment processing platform handling real-time transaction processing, achieving a 30% improvement in system reliability through architectural refactoring.
- Developed and maintained RESTful JSON web services in PHP/Laravel and Python, implementing payment gateway integrations with Interswitch, PaySwitch, and Paystack.
- Optimised system performance through profiling, database indexing, Redis caching, and query refactoring—achieving a 20% reduction in API response times across high-traffic endpoints.
- Implemented user authentication and authorisation systems with JWT tokens, session management, and role-based access control across multiple server environments.
- Built database-driven dynamic applications with MySQL, including schema design, stored procedures, and data migration scripts.
- Applied DevOps fundamentals: Apache server configuration, Linux system administration, DNS management, and Git-based version control for collaborative development.

Software Instructor

Jun 2017 – Nov 2020

NIIT Lagos

- Delivered full-stack web development training to 150+ students per cohort, covering PHP/Laravel, MySQL, JavaScript (ES6+), HTML/CSS, Bootstrap, and jQuery.
- Designed practical project-based curriculum including e-commerce websites, CMS platforms, and database-driven web applications that mirrored real industry requirements.
- Introduced students to version control with Git, Linux fundamentals (Apache configuration, system administration), and web protocols (HTTP, DNS) to prepare them for professional engineering environments.
- Maintained an 80%+ graduate employment rate in software development roles by emphasising industry-relevant tooling, code quality, and problem-solving methodologies.
- Provided extended one-on-one coaching and code reviews, systematically closing knowledge gaps and accelerating student progression from beginner to job-ready developer.

Web Developer

Jan 2012 – Jun 2017

Creativemind Group, Amuwo Odofin, Lagos

- Developed responsive, database-driven web applications for SME clients across retail, hospitality, and professional services using PHP, MySQL, JavaScript, HTML, and CSS.

- Built Android mobile applications in Java, expanding the agency's service offering to cross-platform digital solutions and growing the mobile client portfolio by 30%.
- Administered web servers (Apache/Linux): DNS configuration, SSL certificate management, cron job scheduling, and automated backups—ensuring 99%+ site availability.
- Integrated third-party APIs and payment gateways into client platforms, including e-commerce checkout flows and CRM data synchronisation.
- Led client requirement-gathering, produced technical specifications, designed UI/UX wireframes, and delivered projects on time within agreed budgets.
- Optimised database queries and implemented caching strategies, improving page load times by up to 40% for high-traffic client websites.

Web Developer / Instructor

Feb 2011 – Dec 2012

Galaxy Computer College, Lagos

- Delivered hands-on technical training in web development fundamentals—PHP, MySQL, Apache, CSS, and HTML—to cohorts of 20–30 students per term.
- Designed practical lab exercises and real-world mini-projects (dynamic websites, student portals) to reinforce classroom theory and build student confidence.
- Maintained the college's computer laboratory hardware and software infrastructure, minimising downtime and ensuring an uninterrupted learning environment.
- Built and maintained the college's official website and internal administrative web tools, reducing manual administrative workload by 25%.
- Provided individual tutoring and technical support to students at varying skill levels, consistently achieving high student satisfaction scores.

| EDUCATION

Bachelor of Science in Computer Science

Olabisi Onabanjo University, Nigeria ■ 2003 – 2009

Advanced Certificate in Information Technology

NIIT, Lagos ■ 2009 – 2010

West African Senior Secondary Certificate

St. Finbarrs College, Akoka, Lagos ■ 1990 – 1996
